PrivateWAN

[PrivateWAN: an ISP supplied solution](#)

Regardless of your networking scenarios, a PrivateWAN supplied by a trusted Australian Internet Service Provider delivers real business benefits for you:

- **Cut** your IT and networking costs
- **Consolidate** your Internet connectivity and reduce your costs
- **Remove** bottlenecks and network congestion associated with multi-site VPNs
- **Provide** Internet mobility to “Road Warriors” within Australia or overseas
- **Access** management software to configure your Internet connectivity
- **Collocate** your servers, securely keep your servers onsite or create a hybrid

Call IIG today about implementing a PrivateWAN and instantly better your business.

[A PrivateWAN: better business sense by design](#)

Choose a PrivateWAN and say goodbye to inflated overhead costs, time-wasting connection problems and complicated VPN maintenance. Your PrivateWAN is connected to the backbone of powerful ISP carrier equipment. This means you can enjoy ISP-grade network performance, sophisticated reliability and low latency. A PrivateWAN also offers you superior security, as your traffic is never transported over the Internet.

How an expertly designed PrivateWAN can strengthen your business:

- **Meets your business growth aspirations**
- **Improves your network simplicity**
- **Offers you ISP-grade network performance**
- **Ensures security from Internet exploits**
- **Eliminates costly maintenance**

Let IIG save you time, money and frustration. Call us today about implementing a PrivateWAN and grow your business for the future.

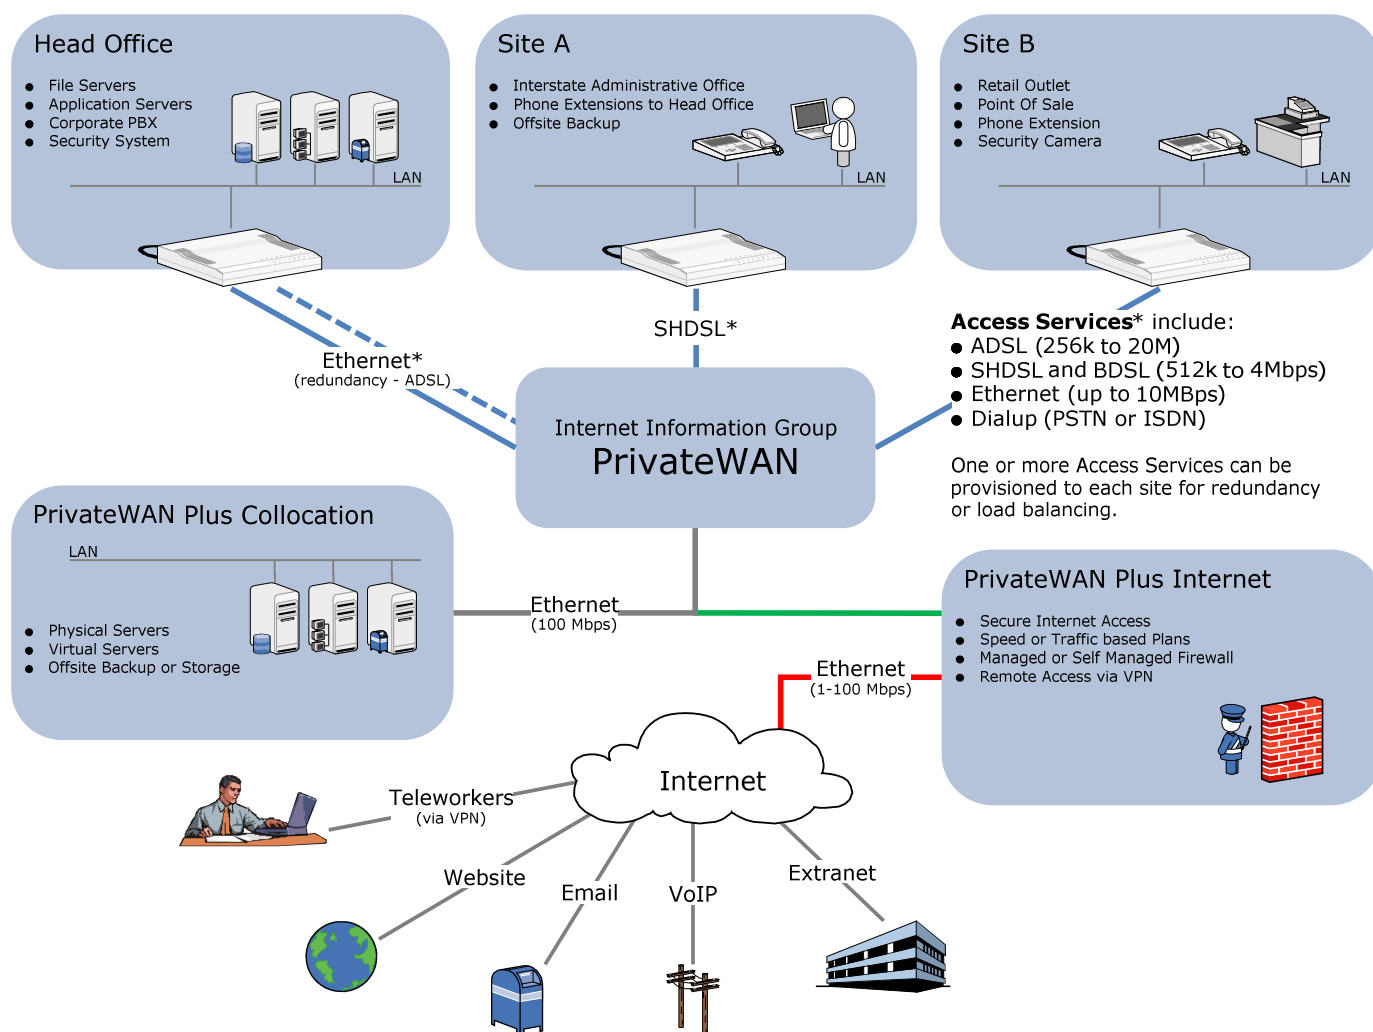

Figure 1: PrivateWAN functional diagram. PrivateWAN offers you a secure, private IP network that allows you to connect your offices within Australia. With the additional options of Internet and Collocation, you can also provide consolidated Internet access to your network and collocation for your servers and equipment in carrier-grade data centres.

Cut your IT and networking costs

Replace your complex, high-maintenance and costly VPN with an IIG PrivateWAN. Achieve ISP-grade network performance and reliable maintenance, minus the expense of in-house technical support.

What you will gain from implementing a PrivateWAN:

- **More affordable** to setup and maintain than a traditional VPN
- **Better potential** for increased site growth in the future
- **Superior security** (traffic remains safely within the PrivateWAN)

What you will eliminate by implementing a PrivateWAN:

- **Eliminate the costly** maintenance of VPN options
- **Eliminate the stress** of finding and retaining reliable VPN administrators
- **Eliminate the cost** of in-house training for a VPN
- **Eliminate the complexity** of a VPN design
- **Eliminate the expensive routers** and cut your overall costs

You can feel confident about outsourcing all of your technical requirements to IIG. Call us today to organize your cost-effective **PrivateWAN**.

[Consolidate Internet connectivity: reduce costs](#)

Imagine being able to purchase one Internet connection plan and divide it amongst all of your office sites. You can stop imagining. This cost-effective solution is exclusively available to customers who implement a PrivateWAN. Additionally, you can choose to add firewall and road warrior features to accommodate your business' needs.

Call us to discuss how a **PrivateWAN Plus Internet Connectivity** can reduce your costs.

[Remove bottlenecks and network congestion](#)

[commonly associated with multi-sites that use VPN technology](#)

When you switch to a PrivateWAN, you can enjoy all the advantages of a VPN while eliminating all the shortcomings of a VPN. Although a popular choice, complicated VPN options can be a nightmare for time-poor businesses to manage and oversee.

Two common VPN options and their associated problems:

- Mesh: every site in the VPN connects to every site in the VPN, offering good performance

BUT It is extremely difficult to oversee and very costly to maintain

- Star Topology: eliminates the complexity of Mesh by making the centre node the point all network connectivity passes through

BUT It creates a bottleneck between sites and dramatically reduces performance

Forget about standard VPN options; experience the superior power of a **PrivateWAN**. Call us today to find out how you can instantly improve productivity and communications within your business.

[Provide Internet mobility to “Road Warriors” within Australia or overseas](#)

Give all of your employees – on or offsite – full access to important files and data 24/7. Flexible and reliable, a PrivateWAN provides a secure access solution for employees on the road and employees working from home or overseas. This mobile, wireless Internet access (non-dedicated access) is an optional implementation of a VPN into your PrivateWAN.

The benefits of having a secure access solution for your offsite employees:

- **No restrictions on the number of offsite employees who need to connect**
- **Gives offsite employees full access, as if they are sitting in the office**
- **Provides anywhere access 24/7**
- **Improves overall communication and centralizes productivity**

Distance or location is not a barrier when it comes to a **PrivateWAN Plus Internet Connectivity**. Call us today to organize a secure access solution for employees who are on the move.

[Access management software to configure your Internet connectivity](#)

Our chosen firewall software (pfSense) will manage your Internet connectivity through a web-based application. This means you can easily configure your high-performance Internet connectivity.

Network Address Translation (NAT):

- Port Forwards (including ranges and the use of multiple public IPs)
- 1:1 NAT (for individual IPs or entire subnets)
- Outbound NAT

VPN options for VPN connectivity:

- IPSec
- SSLVPN
- PPTP

Reporting and monitoring:

- RRD Graphs
- Real Time Information
- Captive Portal (force authentication or redirection to a click through page for network access)

Install your own firewall software or take advantage of our sophisticated firewall software. Call today and discuss your setup of a **PrivateWAN Plus Internet Connectivity**.

[Collocate Your Servers, Securely Keep Your Servers Onsite or Create a Hybrid](#)

Whether it's a dedicated physical rack mount or a virtual server, IIG can collocate your servers and provide instant ISP-grade network performance for your business.

Implement a PrivateWAN and achieve optimal network performance without compromising security. How collocating your servers can benefit your business:

- **Remove bottlenecks and dropouts** that are common in a traditional VPN setup
- **Instantly improve** productivity and reliability across your multi-site business
- **Achieve superior security** within your PrivateWAN configuration

Get the high-performance connection you need at a price you can afford. Call us today to organize a sophisticated **PrivateWAN Plus Collocation** service for your private business network.

Need your servers visible to the Internet?

Our **PrivateWAN Plus Internet Connectivity & Collocation** setup is reliable and affordable. Call us today to discuss your technical requirements.

Why Choose An IIG PrivateWAN

Better Solutions With ISP Design

Our PrivateWAN solutions are properly designed and implemented. Quite simply, this makes excellent business sense for you. With a 15-year reputation for trusted managed solutions, you can feel confident about outsourcing all of your technical requirements to IIG. Call us today to better your business.

The Business Benefits

How our unsurpassed managed solutions can benefit your business:

- Connect your offices and **centralize your productivity**
- **Consolidate your Internet connectivity** and reduce your costs
- **Remove** bottlenecks and network congestion
- **Collocate** your servers, securely keep your servers onsite or create a hybrid
- **Dramatically cut** your IT and networking costs

Consultation & Pricing

Custom Design Consultation

A PrivateWAN is better business sense by design. IIG does not employ a one-size-fits-all approach. Instead, we will expertly configure your IT solutions to suit your individual needs.

We will consider your bandwidth and redundancy requirements, your number of users and your workload.

Following a technical assessment, we will supply the appropriate access technology and the right technical solutions for your business. Call us today to discuss your business growth aspirations and our affordable PrivateWAN pricing.

Pricing

PrivateWAN can be provisioned on almost any Access Service available at the site. These Access Services include **ADSL**, **SHDSL**, **BDSL**, **Dialup** (PSTN or ISDN) and **Ethernet Products**.

Key Benefits:

- Eliminates much of the complexity in maintaining an Internet based VPN.
- No special equipment required: use readily available routers.
- Customized solution for your network requirements.
